

TWO-TON TO FIVE-TON CAPACITY – 50ZP PACKAGED AIR CONDITIONER

INNOVATION AND ECONOMY IN A SINGLE PACKAGE

ENJOY THE COMFORT AND VALUE OF CARRIER COOLING.

INNOVATION

When it comes to air conditioning, you know that value is more than merely a question of price. Does the unit operate efficiently, keeping monthly energy use down? Is it built to last? Will it deliver cool, comfortable air to your home, year after year? You'll find that with Carrier's 50ZP packaged air conditioner, the answers are clearly "yes." But the 50ZP offers more than efficient, reliable operation. It's also a clear example of Carrier innovation; the 50ZP is the first air conditioner in the world with a drain pan that won't rust, ever. That means you can depend on your 50ZP to operate for years with none of the costly "rust-out" problems common with some other units. So plan to keep your "cool" for a good long time!

ENERGY-EFFICIENT

10.0 Seasonal Energy Efficiency Ratio (SEER) rating. Compared to an old 7.0 SEER unit, the 50ZP can reduce your cooling energy bills by up to 25%. Ask your dealer for an estimate of what a new 50ZP will save you, considering your climate and type of home construction. With its optional electric heat package, the 50ZP can provide uninterrupted comfort, year-round.

BUILT TO LAST

Revolutionary base pan. Molded from the same high-strength material often used for automobile bumpers, the 50ZP base includes an integrated drain pan of the same tough material. Unlike the pans on some air conditioners, which are subject to rust and can lead to premature unit replacement, the integrated 50ZP base pan is 100% corrosion-proof. This simple feature can literally add years to the operating life of your air conditioner.

DESIGN

Low-profile design. This air conditioner fits where others can't and it's compact, too, so it will blend beautifully with your home and landscape. While other units require that multiple side panels be removed for routine servicing, the top-access design of the 50ZP speeds routine maintenance tasks like coil cleaning, further reducing the costs of maintaining uninterrupted comfort year after year. The 50ZP is designed for easy, horizontal duct connection.

PERFORMANCE

- 1 Dependability and energy efficiency** is provided in part by the reciprocating compressor. The single most important component of the air conditioning system, this compressor is engineered for years of economical operation.
- 2 Enhanced heating comfort** can be installed quickly and easily with Carrier's cartridge-style heater accessory. This auxiliary heating source helps to provide added comfort during extra-cold winter conditions. The efficient blow-through design easily drops into the blower unit to reduce dealer installation time.
- 3 Quiet delivery of conditioned air** is one of the benefits of our precision-tuned, high-efficiency blower motor. This motor is designed to work perfectly with most duct systems.
- 4 Compact, low-profile design** of the WeatherArmor™ cabinet easily blends into most exterior landscapes. This durable, water-tight casing resists corrosion for years of attractive good looks. The louvered grille allows for proper airflow while protecting the unit's coil against damage from rocks, sticks, lawn/garden equipment and sporting equipment.
- 5 Enhanced indoor air quality** comes from our combination of foil-sealed insulation and a sloped drain pan. Insulation is easier to clean, and the sloped drain pan minimizes standing water inside the unit to limit bacteria growth. Because bacteria can be spread with the delivery of conditioned air, minimizing its growth can actually improve the quality of indoor air.
- 6 Superior rust protection** is provided by our super-tough, high-tech composite base pan. This one-piece base pan is made of an innovative material that completely eliminates the possibility for rust and the premature replacement common with some standard metal pans.
- 7 Enhanced airflow** with the Carrier "swept" fan blade promotes quieter, more energy efficient operation. This new design moves air more effectively while reducing noise from air turbulence.

Carrier's thermostats maximize the performance of Carrier indoor weather systems. Ask your dealer for more detailed information.

WARRANTY

Carrier guarantees your indoor weather with written product and component warranties. We offer a **five-year limited warranty** on the compressor, the most important single component of your cooling system. The entire unit is covered by a **one-year limited warranty**. Ask your Indoor Weather Expert for details.

Always look for these symbols, the air conditioning seals of certified performance, efficiency and capacity.
